

BABIS NIKANDROU

DATA SCIENCE & ANALYTICS ENGINEERING

London, UK | +44 (0) 7856 773535 | nikandroyxa@gmail.com | [LinkedIn](#) | [GitHub Portfolio](#)

POSITIONING STATEMENT

Pursuing a Graduate or Junior Data Scientist or Data Analytics Engineer role, applying postgraduate training and practical Python, SQL and cloud pipeline projects to support dependable data preparation, predictive modelling and business analysis.

PROFESSIONAL PROFILE

Data Science postgraduate with an MSc in Data Science & Analytics, awarded with Distinction and a top-10% class ranking, complemented by an Economics degree and practical business experience. Combine independent technical development with an analyst internship and earlier SQL-based analysis of participant engagement. Apply Python and SQL across API integration, data cleaning, transformation, cloud warehousing and machine learning, with portfolio projects spanning sports analytics, gaming sentiment and predictive classification. Extend this foundation through academic work in imbalanced classification, natural language processing and customer segmentation. Bring operational understanding from hospitality management, including inventory decisions, workforce scheduling and performance reporting. Particularly interested in coding-intensive graduate and junior opportunities offering scope to contribute practical work, learn established engineering practices and develop within a professional data team.

CORE COMPETENCIES

- | | | |
|-------------------------------|--------------------------|--------------------------------|
| • SQL Querying & Optimisation | • Cloud Data Warehousing | • Data Quality & Preprocessing |
| • ETL & Data Transformation | • Feature Engineering | • Natural Language Processing |
| • Python Programming | • Machine Learning | • Exploratory Data Analysis |
| • API Integration | • Model Evaluation | • Git Version Control |

TECHNICAL SKILLS

Languages and analysis: Python, SQL, R, pandas, NumPy, Excel

Machine learning: scikit-learn, classification, clustering, DBSCAN, feature selection, cross-validation, hyperparameter tuning

Cloud and development: Google Cloud Platform, Cloud Storage, BigQuery, Azure, Git/GitHub, BeautifulSoup, API integration

NLP and visualisation: LDA, VADER, LLM integration, prompt engineering, matplotlib, seaborn, Tableau

WORK EXPERIENCE

A&O HOSTELS, LONDON, UK | OCTOBER 2025—PRESENT

BARMAN — PART-TIME

- Provide part-time bar service within a&o Hostels' hospitality operation, maintaining practical industry experience alongside independent technical development.

HILTON DOCKLANDS RIVERSIDE, LONDON, UK | JULY 2025—OCTOBER 2025

F&B MANAGER — PART-TIME

- Evaluated monthly sales and trading patterns to guide inventory levels and stock turnover decisions within the food and beverage operation.
- Automated weekly performance dashboards covering revenue and customer satisfaction, bringing key operating measures together for regular review.
- Matched staff schedules to demand patterns, using operational data to inform workforce allocation and labour expenditure.

KEY ACHIEVEMENT

- Reduced stock waste by 13% and lowered labour costs by approximately 6% through data-informed inventory and scheduling decisions.

RAKUN LTD, LONDON, UK | 2025–6 MONTHS

DATA ANALYST INTERN

- Prepared datasets with Python and SQL, addressing errors and inconsistencies to strengthen data quality; the work reduced these issues by approximately 10%.
- Restructured raw information into formats suitable for analysis, contributing to more efficient data preparation and transformation workflows.
- Contributed to data warehousing activities across multiple projects, with a focus on improving information retrieval and accessibility for subsequent analysis.

OPSO LTD, LONDON, UK | JULY 2022–JULY 2023

BAR MANAGER

- Directed staff training and day-to-day team coordination in a high-volume bar environment, organising work around demanding service requirements.
- Organised stock monitoring, replenishment orders and delivery schedules, combining inventory oversight with practical planning and time management.

LEGO EDUCATION OF GREECE (O3), GREECE | JANUARY 2021–MARCH 2022

BUSINESS OPTIMISATION ANALYST

- Queried and prepared participant information using SQL, combining cleaning, manipulation, aggregation and query optimisation to support recurring reporting.
- Investigated demographics, activity patterns and engagement across more than 3,500 participants to inform decisions about event design and structure.

KEY ACHIEVEMENT

- Helped improve event structure and increase ROI by 12% year over year through data-informed insights.

TECHNICAL PROJECT EXPERIENCE

INDEPENDENT DEVELOPMENT | IN DEVELOPMENT

HOSPITALITY SOFTWARE VENTURE

- Advance a hospitality software venture informed by practical bar operations experience, with initial funding obtained following engagement with the university.

SELF-INITIATED PROJECT | 2025–2026

MOTOGP-RACING FULL STACK CLOUD PIPELINE WITH GCP BIGQUERY ANALYTICS

- Assembled a cloud pipeline connecting BeautifulSoup web scraping, Google Cloud Storage and BigQuery, covering 23 races and seven performance metrics through automated collection and SQL analysis.
- Examined relationships between pole positions, fastest laps and race victories through warehouse queries; produced five matplotlib and seaborn visualisations and maintained the project through Git/GitHub.

SELF-INITIATED PROJECT | 2025–2026

X (TWITTER) — GAMING: END-TO-END GENAI & LLM ANALYTICS PIPELINE

- Connected the X API with Claude Sonnet 4.5 to examine sentiment across 100 gaming tweets, incorporating prompt design, rate limiting, error handling and a modular source-code structure.
- Converted LLM responses into structured sentiment, topic and engagement datasets through an automated ETL workflow, then explored discussion trends and engagement patterns in a multi-chart dashboard.

SELF-INITIATED PROJECT | 2025–2026

LOL: END-TO-END API TO ML ANALYTICS PIPELINE

- Engineered 21 features from 460 matches collected through the Riot Games API, incorporating rate limiting and error handling into the data acquisition workflow.
- Compared logistic regression, random forest and gradient boosting models through a train-test workflow, recording

project evaluation results of 94.5% accuracy and 0.986 ROC-AUC.

MSC DISSERTATION | 2023–2024

HEART ATTACK PREDICTION ANALYSIS

- Tested 15 machine learning models, including random forest and support vector machines, using scikit-learn, grid search and randomised-search cross-validation.
- Addressed class imbalance through random over-sampling, random under-sampling and calibration; investigated feature selection through RFE, SFS and Fisher methods.

MSC PROJECT | 2023–2024

SOCIAL MEDIA ANALYSIS — TEXT MINING WITH YOUTUBE & REDDIT APIS

- Extracted more than 10,000 user comments through YouTube and Reddit APIs, using Python text mining, LDA topic modelling and VADER sentiment analysis to examine discussion themes and opinions.

MSC PROJECT | 2023–2024

MARKET BASKET ANALYSIS, CUSTOMER SEGMENTATION, RFM & CLUSTERING

- Segmented purchasing behaviour through SQL-based RFM analysis and Python DBSCAN clustering, distinguishing high-value, VIP and dormant customer groups to inform potential marketing approaches.

EDUCATION & TRAINING

MSC DATA SCIENCE & ANALYTICS, 2023–2024

University of Westminster, London, UK

Distinction; Top 10% of Class

Study areas: Machine Learning, Data Warehousing, Business Intelligence, Business Analytics, Big Data, Data Visualisation, Web and Social Media Analytics.

MASTER'S PROGRAM IN DATA ANALYTICS, 2022–2023

Purdue University by IBM, London, UK

Training in SQL, Python data analytics, visualisation and dashboarding.

BSC ECONOMICS, 2009–2014

Aristotle University of Thessaloniki, Greece

ADDITIONAL INFORMATION

Languages: English and Greek (bilingual)

Licences: Driving licence categories A and B; sailing and lifeguard licences

Interests: Football, snowboarding, films and gaming
