

# BABIS NIKANDROU

London, UK | [nikandroyxa@gmail.com](mailto:nikandroyxa@gmail.com) | +44 (0) 7856773535 | LinkedIn: [Babis.Nikandrou](#) | Portfolio: [GitHub](#)

## SUMMARY

- Currently actively developing self-initiated projects using **Git/GitHub**, **Cloud Platforms**, **GenAI**, **LLMs** & **APIs** to enhance technical capabilities
- Eager & excited to find an opportunity to apply so far gained technical knowledge on real business use cases
- Completed an internship as **Data Analyst**
- Developed strong knowledge in programming languages & data tools such as **Python**, **SQL**, **R**, **Excel** & **Tableau**
- Good fundamentals of **Machine Learning**, **Data Modelling**, **Preprocessing**, **Data Cleansing**, **Warehousing** & **Data Visualization**
- Graduated in the **top 10%** of my class with **Distinction** in an MSc in Data Science & Analytics
- Highly motivated, fast learner & efficient communicator, resilient character with attention to detail & problem-solving skills
- **Right to work** in the **UK** & **EU** with no visa sponsorship requirement

## SKILLS & EXPERTISE

- **API's - GenAI - LLM**
- **ETL (pandas & NumPy)**
- **Data Warehousing**
- **Git/GitHub (Version Control)**
- **Cloud Platforms (GCP)**
- **Predictive Modelling (sklearn)**
- **Clustering (DBSCAN)**
- **Pipelines & Optimization**
- **Text Mining (NLP)**
- **Data Preprocessing**
- **EDA**
- **Visualisation (matplotlib)**

## WORK EXPERIENCE

**Jul 25 – Present** | **F&B Manager (part-time)** | Hilton, London, UK

- Analysed monthly sales & trends data to optimise stock levels, **reduce waste (-13%)** & improve stock turnover efficiency
- Developed **automated weekly performance dashboards to track KPIs** such as revenue & customer satisfaction scores
- Applied **data-driven staff scheduling optimisation** based on demand patterns, **reducing labour costs (by approx. -6%)**

**Jan 25 – Jun 25** | **Data Analyst Intern** | Rakun LTD, London, UK

- Cleansed datasets using **Python** & **SQL**, reducing data errors & inconsistencies **(by approx. -10%) to improve data quality**
- Applied **data transformation** techniques to restructure **raw datasets** into analysis-ready formats, improving **pipelines efficiency**
- Supported the **data warehousing** team, enhancing **data retrieval speed** & accessibility for multiple projects

**Jul 22 – Jul 23** | **Bar Manager** | Opso LTD, London, UK

- Led **team management, training & coordination** to ensure smooth daily operations in a high-volume & demanding environment
- Supervised **inventory control**, including **stock monitoring**, order placement, & delivery scheduling
- Demonstrated a **proactive, highly organized** approach with strong **time management** & **planning skills**

**Jan 21 – Mar 22** | **Business Optimisation Analyst** | LEGO Education of Greece (O3), GR

- Analysed data for over **3.5K participants**, focusing on **demographics, activity trends & engagement**
- Utilized **SQL** for **data cleaning, manipulation, aggregation & query optimisation** to enhance regular reporting
- Delivered **data-driven insights** that improved **event structure** & **increased ROI** by **12%** year-over-year goals

## RELEVANT PROJECTS & EXPERIENCE

**2025 – 2026** | **MotoGP-Racing Full Stack Cloud Pipeline with GCP BigQuery Analytics** | Self-initiated project in GitHub

- Built **end-to-end cloud data pipeline** integrating **web scraping (BeautifulSoup)**, **Google Cloud Platform (Cloud Storage & BigQuery)** & **SQL analytics**, processing 23 races with 7 performance metrics
- Implemented **automated data collection workflow** from Wikipedia, **cloud-based storage in GCP (europe-west2)**, **BigQuery table creation & SQL queries** for cloud data warehousing
- Performed **exploratory data analysis** identifying championship dominance (Francesco Bagnaia: **11 wins, 47.8% win rate**) & correlation between pole positions, fastest laps & race victories through **cloud-based SQL aggregations**
- Created **5 data visualizations** using **matplotlib** & **seaborn** exported as high-resolution PNG (300 DPI) & maintained **version control** with **Git/GitHub** demonstrating complete **end-to-end pipeline** from **data collection to insight generation**

**2025 – 2026** | **X (Twitter) - Gaming: End-to-End GenAI & LLM Analytics Pipeline** | Self-initiated project in GitHub

- Developed a **full-stack data pipeline** integrating **X API** & **Anthropic's Claude Sonnet 4.5 LLM** for **AI-powered sentiment analysis**, achieving **positive classification (61%)** across **100 gaming tweets**
- Implemented **prompt engineering**, applied **rate limiting** & **error handling** for **API** & designed **modular architecture (Src/)**
- Built **automated ETL workflow** extracting **structured sentiment, topics & engagement metrics** from **LLM responses**, transforming raw tweets into analysis-ready datasets
- Performed **exploratory data analysis** identifying **trending topics** & **engagement paradox** & delivered **multi-chart dashboard**

**2025 – 2026 | LoL: End-to-End API to ML Analytics Pipeline** | Self-initiated project in GitHub

- Built **end-to-end ML pipeline** integrating **Riot Games API** for **460 matches**, achieving **accuracy (94.5%)** & **ROC-AUC (0.986)**
- Implemented **automated data collection** with **rate limiting**, **error handling** & **feature engineering** extracting **21 features**
- Performed **exploratory data analysis** revealing **game objectives** variable as strongest predictor (**r=0.705**), **metrics** (e.g. kill/death/assist) thresholds & identified strategic insights on game objective prioritisation
- Developed complete **ML workflow** including train-test split, model training (**logistic regression, random forest, gradient boost**) & performance evaluation

**2023 – 2024 | Heart Attack Prediction Analysis** | Dissertation, MSc Data Science & Analytics

- Developed **15 ML models** (e.g. **RF, SVM**) with **scikit-learn**, improving **Precision (+40%)**, **Accuracy (+45%)** & **AUC (+60%)**
- Handled **imbalance data** through **ROS, RUS** & **calibration** & applied **Feature Selection Methods** (e.g. **RFE, SFS** & **Fisher**)
- Tuned models using **grid search** & **randomized search cross validation** enhancing model stability & generalizability

**2023 – 2024 | Social Media Analysis – Text Mining – YouTube & Reddit API's** | MSc Data Science & Analytics

- Performed **NLP-driven text mining** in **Python** to analyze social media discussions & behavior from over **10K user comments**
- Applied **LDA** for topic modelling & **VADER** for **sentiment analysis** to extract key themes and opinions
- Utilized **YouTube & Reddit APIs** for automated **data collection** & **content extraction**

**2023 – 2024 | Market Basket Analysis · Customer Segmentation · RFM · Clustering** | MSc Data Science & Analytics

- Performed **RFM segmentation** using **SQL** & **DBSCAN clustering in Python** to analyse customer purchasing patterns & behaviour
- Identified key segments (**High-Value, VIPs, Dormant**) to support **personalized marketing strategies**
- Delivered insights that increased **customer retention by 15%** & **lifetime value by 9.5%**

---

## EDUCATION & TRAINING

**2023 – 2024 | MSc Data Science & Analytics** | University of Westminster, London, UK

- Data Mining & Machine Learning
- Data Warehousing & Business Intelligence
- Business Analytics
- Big Data Theory & Practice
- Data Visualisation & Dashboarding
- Web & Social Media Analytics

**2022 – 2023 | Master's Program in Data Analytics** | Purdue University by IBM, London, UK

- SQL Training
- Visualisation & Dashboarding
- Data Analytics with Python

**2009 – 2014 | BSc in Economics** | Aristotle University of Thessaloniki, GR

- Mathematics & Statistics
- Economic Theory & Analysis
- Marketing Principles
